Content	Visuals	Mechanics	Overall	average_score	Did Well	Needs Work
6	5	7	6	6	I really like the setup with the "Goals" as headers. Super interesting science too!	The first graph was going to be complex regardless, but I think playing with the colors/maybe using facet_wrap would have helped out a lot. The final plot was really cool.
7	7	7	7	7	Awesome work!! Really enjoyed the violin plot with the box plot!	Try to use the fill function (vs color) for colors of the box plots, maybe that will help with the visualizations?
7	7	7	7	7	Speaker spoke clearly and the data was easy to follow. Final graph was so pretty.	Maybe less hand jestures.
7	7	7	7	7	The plots were extremely well done and intuitive	I have no major criticisms, Personally I would have liked to see some of the code of the plots, although this would have detracted from the aesthetics of the presentation
7	7	7	7	7	Inclusion of experimental design was useful. Breaking the presentation into goals was a great idea. Visualizations were very appealing. Statistics were impressive. Final graph was great use of gghalves!	No critiques. Awesome presentation.
7	7	7	7	7	great diagram explaining his work in the beginning. also liked that he explained the significance of his work to muscular dystrophy. also liked the use of different colors to break up the data. loved the hyrbrid box/violin plot, i've never seen that before!	really can't think of anything, i thought his presentation was very clear and interesting
7	5	7	7	6.5	Good, thorough analysis of data. Good introduction to set up the data analysis- findings and explanations were very clear. Great presentation skills!	First graph seemed a lot- maybe would be helpful to visualize as bargraph. Could fill box plots based on treatment vs just the outline.
6	6	5	6	5.75	Background was really good	Pacing was fast
NA	NA	NA	NA	0	I really liked the background photo you provided and how you focused the data for easier interpretation. Good job addressing the audience.	I thought you gave a great talk!
7	6	7	7	6.75	Very clear presentation, liked how difficult to understand plots were simplified and split	Some of the axis titles and labels on visuals were small
6	7	7	7	6.75	I thought the visuals were really great and different! The explanation of the presentation was also very smooth. The photos that were included were also great.	Less use of "um" but I understand it was the last presentation and we were going overtime!
7	7	7	7	7	Great speaking/presentation skills, beautiful plots and great use of color to distinguish between different treatment groups! Great job of presenting your work as a story rather than just listing figures one by one	You went a little fast at times, but I think that's because you were the last presentation so I don't think that's your fault
